HEINE has been on the road to success right from the start with the top-quality and popular diagnostic instruments of the mini 3000 series, which were completely redesigned in 2006. Winning two renowned design prizes, the 2009 iF product design award and the 2009 red dot design award, impressively confirms the slogan “mini to the max”. The mini 3000 series has successfully established its leading position in these competitions from among well over 5,000 submissions.

The continuing popularity of the mini programme is the result not only of its excellent appearance, but also of its state-of-the-art technology. HEINE’s conveniently-sized and compact pocket instruments feature all of the top-quality features of HEINE full-size instruments. Furthermore, innovative system details, such as improved XHL lens lamp technology, ensure optimised diagnostic quality and reliability. The modern and ergonomic design is just as innovative, and the use of the very best materials guarantees high levels of durability at low weight.

Excellent features, which have now been honoured with two design prizes and prove: When it comes to the mini 3000 programme from HEINE it’s worth taking a close look.
