HEINE OMEGA 500® UNPLUGGED Binocular Indirect Ophthalmoscope

Compact, light and uniquely-mobile.

100% Mobility. The new OMEGA 500 UNPLUGGED with the mPack rechargeable headband-mounted battery. No cables, no connections, no limits. You are free to work anywhere.

Greatly-improved comfort thanks to the exceptionally light mPack UNPLUGGED rechargeable headband-mounted battery and the comfortable OMEGA 500 headband, now reduced both in size and weight, and with larger headband cushions. The OMEGA 500 with mPack UNPLUGGED is the lightest binocular indirect ophthalmoscope of its kind.

Sharp, clear retinal images. The entire illumination system has been completely re-designed and is twice as bright as that of the previous model, the OMEGA 180. The result: Sharp, high-resolution retinal images with dilated, as well as non-dilated pupils, down to 1mm in diameter.

With all these improvements, the OMEGA 500 UNPLUGGED heralds a new era in ophthalmoscopy. Many of these innovations result from our close co-operation with physicians and universities. The OMEGA 500 UNPLUGGED is above all, an instrument which fulfills the user's needs like no other.
